TO OUR PATIENTS

Following Governor Abbott's announcement and permission from the American Academy of Ophthalmology for regional decision-making, we are excited to let you know that we are opening our clinic **starting May 4, 2020** for routine medical care.

The office staff will begin calling patients in order to reschedule and confirm appointments. Our greatest concern is to continue to provide a high level of eye care, in the safest manner possible and to protect you and our staff. We have remained open throughout this crisis for urgent and emergent care and will continue to follow the CDC recommended safety measures that we have put in place.

We will screen patients at the door before entering

You will be required to have on a mask.

We are not able to provide masks, so, please bring your own.

We will continue to practice social distancing.

Please come alone if possible. We will only allow people who need assistance to be accompanied in the office.

Exam rooms will be disinfected and cleaned between patients.

We aim to keep talking and time in the examination room to a minimum.

We also have the option for telemedicine visits when appropriate. Please call us at 817-332-2020 for our specialists to triage your concern.

We hope you are all safe, and look forward to seeing you again soon.

Brian Flowers, MD
